### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: claims 1, and 4-21 are allowed because, the prior art or the prior art of record specifically Adler et al. (US 6,088,123) does not teach a mask pattern having a blue noise characteristic and *each bit in the mask pattern indicating either a target embedding position or a non-target embedding position represented by binary information* and applying the mask pattern to part of a image data and modulating the image data corresponding to the target embedding position to embed the predetermined information of claims 1, 6 and 7, a mask pattern having a blue noise characteristic and *each bit in the mask pattern indicating either a target embedding position or a non-target embedding position represented by binary information*, applying the mask pattern to part of the image data and detecting a modulated state of image data corresponding to the target embedding position to extract the predetermined information of claims 8, 9 and 10, making each coefficient of a two-dimensional mask correspond to respective bit information of a additional information, each coefficient being represented in multilevel to identify a priority for embedding the bit information of the additional information, digital watermark embedding means to modulate an image data in accordance with the coefficients of the mask, *on the basis of a positional information relationship obtained by assigning the two-dimensional mask onto the image data as a corresponding result, thereby embedding the bit information in the image data, wherein the mask has a periodic or pseudo-periodic peaks on a radial frequency domain of resultant binary information in a case where each coefficient of the two-dimensional mask is binarized* of claims 11, 13

Art Unit: 2621

and 14, inputting a two-dimensional mask in which each coefficient corresponds to respective bit information of additional information, *each coefficient being represented in multilevel to identify a priority for embedding the bit information of the additional information*, and applying the mask pattern to part of an image data, detecting a modulated state of image data in accordance with positions of coefficients in the mask, and extracting the additional information on the basis of the detection results, wherein *the mask has a periodic or pseudo-periodic peaks on a radial frequency domain of resultant binary information in a case where each coefficient of the two-dimensional mask is binarized* of claims 17, 20 and 21, combined with other features and elements of each of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
